

ENCINO
ENVIRONMENTAL
SERVICES

Emissions Management & Compliance Solutions

for critical infrastructure & industrial operations

Encino supports critical infrastructure and industrial operations across a wide range of industries with comprehensive emissions testing, compliance solutions, and advanced monitoring technologies. Our broad service offering, extensive testing expertise, and technology-forward approach help clients reduce emissions, meet regulatory demands, and make informed operational decisions.

Industries We Serve

Oil & Gas

Data Centers

LNG Facilities

Manufacturing

Landfills

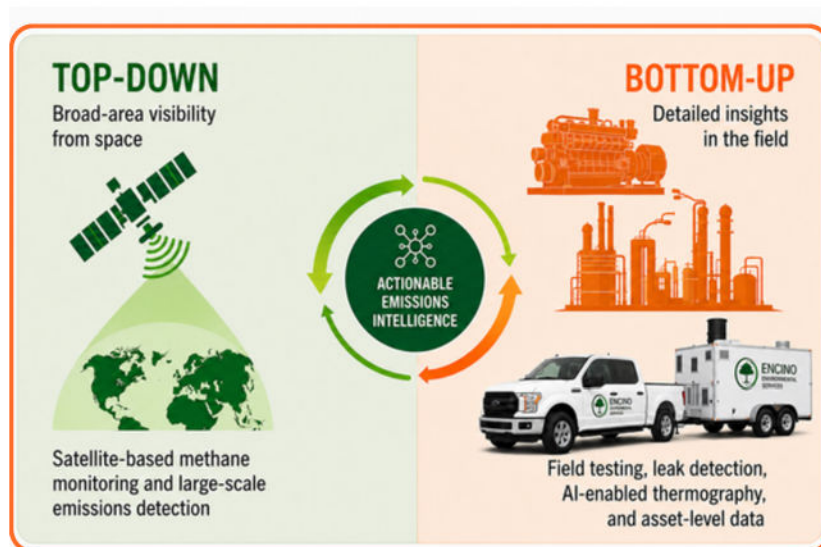

Agriculture

Actionable Intelligence for Emissions Management

Through partnerships with SENSIA Solutions, Satlantis, LLC, and other technology leaders, our top-down and bottom-up solutions combine AI-enabled thermography, leak quantification, satellite-based methane monitoring, permitting and compliance advisory, and data platforms to turn complex emissions data into clear direction.

Testing, Compliance & Support Services

Engine/Stack Testing

Leading-edge mobile stationary source emissions testing labs and technical expertise.

PRV Testing & Valve Greasing

Pressure relief valve testing and maintenance support for safety, efficiency and compliance.

LDAR Services

Leak detection and repair solutions that support today's standards and tomorrow's regulations including K & NSPS OOOOb/c.

Catalyst Washing

In-house catalytic converter and element washing for optimal emission control.

ECD Performance Testing

Determine total gaseous organic concentration from your ECDs.

Instrument Calibration

NIST-traceable accuracy, ASME and ISO alignment and full reporting.

NHV Testing

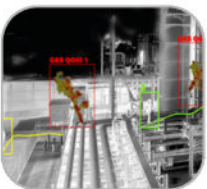

Mobile NHV vent gas testing with cost-Effective, EPA-approved, real-time results.

Permitting & Advisory

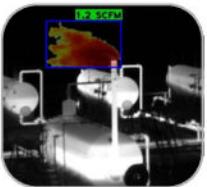

Strategic advisory support for emissions reduction, compliance assessments and permits.

Monitoring & Detection

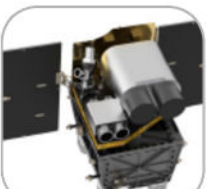

CEMS Systems

Continuous visual emissions monitoring for plume identification and quantification.

Flare Monitoring

high-definition Optical Gas Imaging (OGI) solutions for monitoring flare stack performance.

EmSAT™

Satellite methane detection using multispectral imaging for high-resolution asset screening with low MDLs and up to 12 daily visits.

Products & Technology

OGI Cameras *for Sale or Rent*

AI-powered handheld or fixed options for gas detection, quantification and more.

Enviromech™

Composite thief hatch that significantly reduces a key source of liquid storage tank emissions and flash loss.

MOLE-DAS™ *fixed & portable options*

Combustion intelligence system with real-time analytics to optimize performance, compliance and operational efficiency.
